

Breach Intel — Week of 2026-07-16 → 07-23

Breach Intel — Week of 2026-07-16 → 07-23

Computed from RSS security items + live weekly-roundup research, grounded against the MITRE knowledge silo (crossview). See [[Security Map]].

Headline: potential people affected

Tier	Basis		Total
Company-confirmed	Orgs	stated victim counts	≈ 27.9 M
+ Actor-claimed exfil	Unverified claims (records/rows)	group	≈ 104 M running
+ Conduent cumulative	Healthcare tally that landed this period	notification	≈ 166 M

Bottom line: ~104 million records/individuals across incidents newly surfacing this week; ~166 million if you fold in Conduent’s cumulative 62.2 M notification total.

⚠ *Records ≠ unique people.* Counts overlap across the ShinyHunters CRM cluster, mix “rows/files/installs” with “individuals,” and actor claims are unverified. Treat as an **upper-bound estimate**, not a census.

Incident ledger

Company-confirmed disclosures - **KDDI** (Japan telecom) — 14.22 M customers (emails + passwords) — unattributed - **AssuranceAmerica** — ~7 M records — compromised employee account - **Aflac** (Japan subsidiary) — 4.38 M customers (PII + bank details) - **Moody Bible Institute** — 2.3 M donors/students/alumni — *ShinyHunters* - **Transport for London** — 27,000 employees; 148 systems disabled — *Scattered Spider* (Thalha Jubair, Owen Flowers named)

Actor-claimed exfiltration (unverified) - Abbott Laboratories — 30 M PII rows incl. 1 M+ SSNs — *ShinyHunters / ShadowByt3\$* - **Coca-Cola Europacific Partners** — ~23 M records (63 GB) — *Gehenna* - **Fluke Corp** — 21 M+ Salesforce records (100 GB+) — *ShinyHunters* - **Kudankulam NPP / Reliance** — 858 K files — *World Leaks* - **Ingram Content Group** — 80,190 rows — *ShinyHunters* - **ModHeader extension** — 1.6 M installs (supply-chain) — unattributed - **Bosch** — engineering data — *D1R*; **Accenture** — 35 GB claimed

Cumulative update - Conduent — healthcare notification tally reached **62.2 M** individuals this period (older intrusion)

Most common vulnerabilities & exploit chains

1. **SaaS/CRM identity abuse — the dominant cluster** (Abbott, Coca-Cola EP, Fluke, Ingram). No CVE — pure identity attack: CAPEC-98 Phishing/vishing → ATT&CK T1078 Valid Accounts (OAuth connected-app abuse) → T1567 Exfiltration over Web Service (bulk Salesforce API export) (*chain confirmed live in MITRE silo*)
2. **Third-party / helpdesk / supply-chain** — EY (15 days inside a vendor helpdesk platform), Pinnacle via Mercadien accounting firm, ModHeader.
3. **Edge webmail exploitation** — Roundcube CVE-2024-42009, CVE-2025-49113; **Zimbra** (CISA/NSA/FBI advisory, **Russia state-supported** — from RSS).
4. **SharePoint “ToolShell” chain** — CVE-2026-56164 + CVE-2026-56155 → IIS machine-key theft → RCE.
5. **WordPress core pre-auth RCE** — CVE-2026-63030 + CVE-2026-60137 (~500 M sites exposed).
6. **Adobe ColdFusion** CVE-2026-48282 — critical, active exploitation.
7. **AI-agent-driven attacks** — JadePuffer ransomware auto-driven via **Langflow**; Claude Code / DeepSeek-v4 abused by China-linked ops (echoes SANS ISC “autonomous attacker is your own AI model,” RSS).
8. **Ransomware impact** — ATT&CK T1486 Data Encrypted for Impact — Coca-Cola/fairlife, Bosch.

Actor attribution breakdown

- **ShinyHunters** — most prolific this week; Salesforce/CRM extortion (Abbott, Fluke, Ingram, Moody Bible)
- **Gehenna** — Coca-Cola Europacific
- **Scattered Spider** — Transport for London
- **World Leaks** — Kudankulam / Reliance
- **D1R** — Bosch · **ShadowByt3\$** — Abbott (2nd breach) · **BlackField** — 2 TB corp theft

- **China-linked / UNK_MassTraction** — Roundcube + gov/university mail (AI-assisted)
- **Russia (state-supported)** — Zimbra Collaboration Suite (CISA/NSA/FBI)
- **Unattributed** — most healthcare/insurance disclosures (KDDI, Aflac, EY, Markel, Lake Region)

Takeaway

The week's real story is **identity, not CVEs**: the largest confirmed and claimed losses came from social-engineered access to SaaS/CRM platforms (Salesforce) — a phishing → valid-accounts → web-service-exfil chain that patching can't fix. State-nexus activity (Russia/Zimbra, China/Roundcube) and AI-orchestrated intrusion are the emerging secondary themes.
